

Trail and Gateway - Summit St to North Street

Project Description:

This section of the Gateway District from Summit Street to the North Street viaduct will be refurbished as one enters from the south into downtown. The steep, eroded and overgrown banks will be selectively cleared and replanted with stabilizing and lower maintenance plant materials along with a decorative retaining wall. The sidewalk will be replaced with the 8' wide trail and separated from the road by a planted strip where the identification panels and light poles will alternate. Event banner columns will flank each side of the viaduct that will provide a spot for local Delphi specific events to be advertised.

Concept Plan

Banner Pole

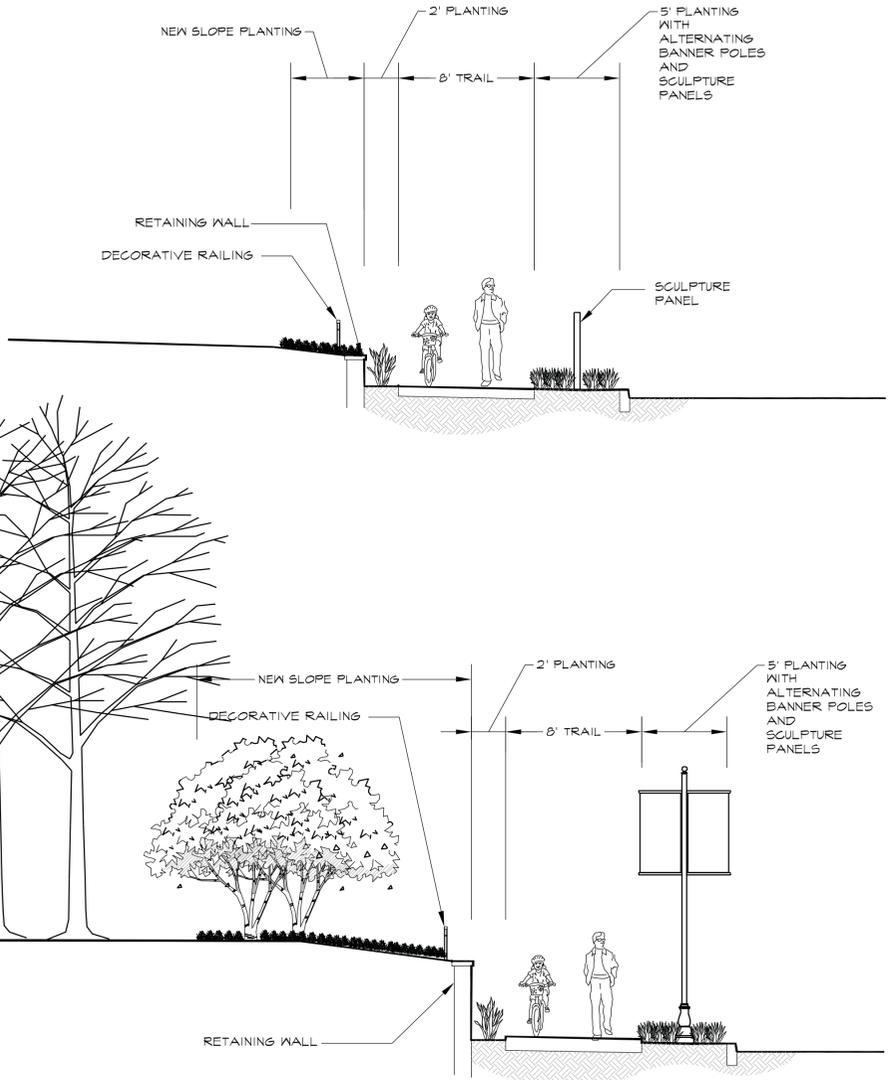

Bank

Stabilization Planting

Typical Sections

Gateway Elements

Gateway Components

- Repeating Elements
- Viaduct Enhancements
- Event Banner gateway column
- Retaining Walls
- Bank Stabilization
- Decorative Planters
- Decorative Pavers

Trail and Gateway - North Street to Riley Park Rd

Concept Plan

Project Description:

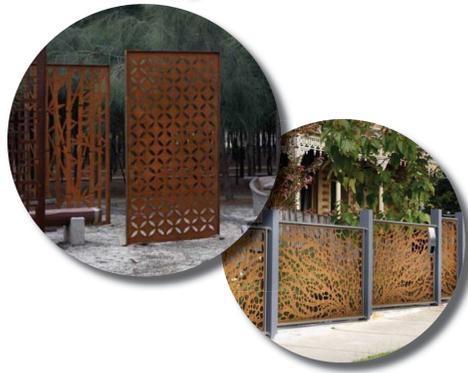

The Gateway district defined by Riley Drive to the north and the North Street viaduct to the south on the west side of Washington Street will have a decorative retaining wall constructed at the base of the slope ending at an overlook or resting area as one is traversing up the hill. As the slope falls off into Riley Park, the retaining wall will be replaced with a decorative railing on this section. Separation for trail users along this heavily travelled roadway will take place within a planted greenstrip next to the curb. The eastside of the street will be selectively cleared and enhanced with some stabilizing plant materials to assist with erosion control. Components included in this section of the gateway area include the repeating elements or panels, decorative banner poles and lighting, viaduct enhancements (if allowed) and landscaping for erosion stabilization of the steep banks.

Gateway Components

- Repeating Elements
- Viaduct Enhancements
- Event Banner Poles
- Retaining Walls
- Bank Stabilization

Trail and Gateway - Gateway Panels

Project Description:

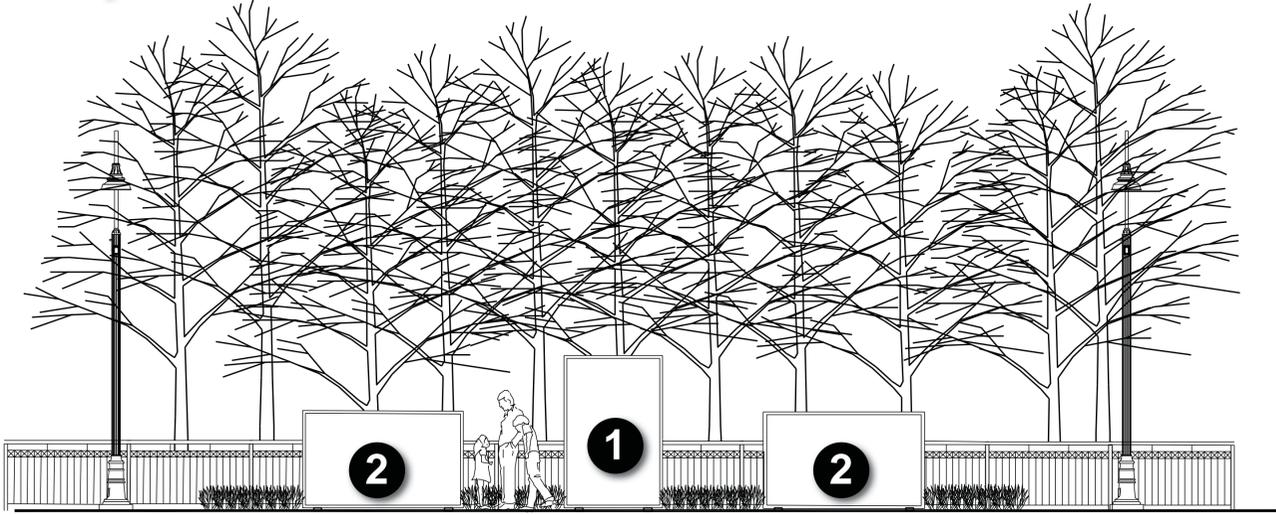

The Gateway panels that will be repeated within this district should be designed to be "Delphi specific" reflecting history, architecture, events, locally recognizable patterns, and/or prominent residents. Repetition of the panels will be alternated with light or banner poles and will allow trail users and visitors to learn something new or reflect on the history of Delphi.
